

## ENVIRONMENTAL & ENERGY POLICY

As Regnum Hotels, we are aware that the environment, communities and cultures in which we operate are vital for the success of our business. "Respect for Nature and the Environment" is one of the core values of the company and emphasizes our commitment to sustainable development and making a positive impact on society through responsible leadership.

We are aware that our services and products may have positive as well as negative environmental, social and economic impacts. Our goal is to minimize our negative impacts in these three areas without compromising our service quality and our commitment to meet legal requirements and other obligations. We aim to regularly review compliance with the law and this policy, provide the necessary resources, measure our progress and continuously improve our performance.

Our goal is to be a pioneer in the sector with the projects that we implement, to create awareness and to support sustainable tourism.

We carry out our activities for sustainable tourism in line with our principles and values of being visionary, respecting nature and the environment, valuing people, sincerity and perfectionism; reviewing our activities on a regular basis.

As Regnum Hotels, within the scope of this policy, we set our objectives and goals for all our services, define our responsibilities to achieve them and encourage the participation of all our stakeholders, notably our employees and suppliers.

Regnum Hotels commits to utilize its resources and means through the effective implementation of the Integrated Quality Management Systems for the purpose of:

- Using our energy and natural resources efficiently, increasing recycling and recovery,
- Considering energy efficient and environmentally friendly technologies while developing all our processes starting with the design stage,
- Developing and implementing energy efficient projects that will have a positive impact on climate change,
- Developing and implementing projects that will support sustainable tourism within the scope of all our activities,
- Raising awareness among our employees, stakeholders and society regarding the environment and energy,
- Reducing CO<sub>2</sub> emissions resulting from our production and services,
- Carrying out all our activities by implementing Environmental and Energy Management Systems.
